LEAarning analytics and AI for personaliseD lEaRning

[LeaderAI]

Project Number: 2022-1-CY01-KA220-HED-000086763

What is 'LeaderAI'?

LeaderAI is an Erasmus+ project aiming to address the need for effective Higher Education (HE) digital learning that responds to students' needs, strengths, and skills, through the proper exploitation of advanced technologies.

The project is implemented by a consortium of six organisations from Cyprus, Greece, Estonia, Romania and Portugal. Started on 31/12/2022 it will last until 30/12/2024.

LeaderAI will develop a Toolkit with practical guidelines, scenario-based training, and an Interactive eLearning platform with digital resources on how HEIs can use AI-based and data-driven tools and approaches for personalised instruction.

Who could be interested?

HE faculty & staff (leadership teams, instructors/lecturers, academics, researchers, learning scientists, PhD. Candidates) who so far have no or basic knowledge and skills about the potential and possibilities of integrating AI-based and data-driven tools into teaching and learning practices.

Learning designers & educational technologists who provide solutions and development for all staff, who can learn how these emerging technologies work to assist the teaching staff for an effective implementation.

AI and data analytics experts who can exploit the results produced, as they will be able to understand the needs of HE staff, to develop tools that will offer meaningful opportunities to the educational community.
