

Welcome to LeaderAI Project!

Project's presentation

Welcome to LeaderAI project newsletter, here you will find information about the project's state, what are partners working on and what our next steps will be.

As you may know, with this project we aim at supporting HE instructors, academics, and educational technology practitioners by providing practical guidelines to be adapted by them for their teaching and learning activities. The consortium will work within the goals of the Commission's European Education Area, to improve the digital capacity of Europe's education system by exploiting the opportunities given by new technologies such as Artificial Intelligence.

Not only you can follow the project on the newsletters you receive but also by following us on social media, where we release some updates of the project, and on the project's website:

Project's results

The LeaderAI project consortium adopts an approach which addresses the need for effective Higher Education (HE) digital learning that responds to students' needs, strengths, and skills, through the proper exploitation of AI-based tools and data-driven technologies.

1. The LeaderAI Toolkit will support HE staff designing personalized courses through AI-based tools and data-driven technologies.

2. The Scenario-based Training and Piloting will provide hands-on opportunities for HE teaching staff on how to personalise their instruction through open source/freeware AI-based and data visualisation tools.

3. The Dissemination Workshops will inform decision makers/NGOs and officers from relevant Ministries, experts in the field of education about the project achievements and ways to valorize them.

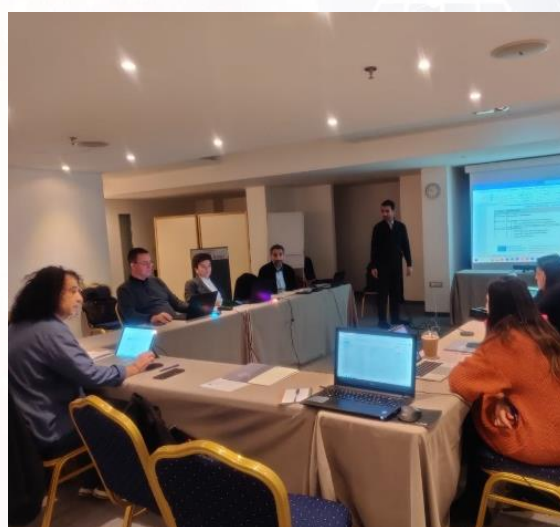

4. Interactive eLearning platform and digital resources will equip HE staff with a collection of hands-on digital teaching and learning material they can access anytime-anywhere; will demonstrate the usage of AI-based and analytics tools for personalised teaching and learning purposes; will build HE staff's pedagogical and digital competences in personalising their courses through selected AI-based and analytics tools; and will allow HE staff to participate in a virtual community for knowledge sharing.

Partners first steps and meetings

The consortium met online few times to start working on the materials and ideas of the project.

Then, on 10th of March 2023, representatives from partners institutions met in Rhodes at the University of Aegean, to analyse the achieved results so far and plan for the next activities.

The implementation of research activities related to the LeaderAI Toolkit development went well in all countries - the literature review is finalised and the processing of the administered questionnaires' results is almost ready! All partners will elaborate their research report based on these achievements!

This meeting was a very significant step was for the consortium as we could clarify some important points of the project and keep going with our work.
